Business Requirements Document(BRD) Template

Project/Initiative

Month 20YY

Version X.XX

Company Information

1 Introduction

1.1 Project Summary

1.1.1 Objectives

[These should describe the overall goal in developing the product, high level descriptions of what the product will do, how they are aligned to business objectives, and the requirements for interaction with other systems.]

Provide users with a wishlist for planning future trips, with support for multiple lists. Lists must be synchronized across platforms, so that a list created on the web version is available in the mobile app and vice versa. From a business perspective, the feature serves as a source of data on user preferences and travel plans, enabling personalized marketing campaigns.

1.1.2 Background

[Provide a brief history of how the project came to be proposed and initiated, including the business issues/problems identified, and expected benefit of implementing the project/developing the product.]

Users usually plan their trips in advance and create different lists for different purposes (e.g., “Christmas Trip”, “Spring Trip”). Currently, the service gives them no convenient way to organize the options they find: users either lose them or have to keep everything in one general list or in third-party tools such as note-taking apps. As a result, they have to search again from scratch and are less likely to return to the service.

The wishlist feature addresses this problem. Users will be able to create several lists and share them with friends and family. Expected benefits:

- higher user retention and more repeat visits;
- personalized discount offers based on users’ saved preferences;
- new user acquisition through list sharing.

1.1.2.1 Business Drivers

[List the business drivers that make development of this product important. These can be financial, operational, market or environmental.]

The development of this feature is driven by several business needs:

- Marketing campaigns for personalized sales
- New users engagement through sharing the wishlist with friends and family

1.2 Project Scope

[Describe what work is in scope for the project, and specifically what work is out of scope… beyond the current budget, resources and timeline as approved by the project stakeholders. This is designed to prevent "scope creep" of additional features and functions not originally anticipated.]

The user creates several wishlists for different purposes and is able to share them.

1.2.1 In Scope Functionality

- User creates several wishlists
- The wishlist table compare main several characteristics of the hotels
- The hotel comparable table enables to compare up to 3-5 hotels
- The system highlights the differences between the comparative hotels
- The user is notified if his preferred option has small number of available rooms
- The user is notified about special campaigns or discounts in the preferred options
- An unauthorized user can create a temporary list, which is stored in cookies. A temporary list is available only in the current browser and may be lost if the cookies are cleared or expire. To save a list permanently, the user must sign in or register. Once the user is authorized, the temporary list is transferred to their account.
- The user can share his list with others
- List, created on the computer, should be synchronized with the list on the phone device via cloud services
- The system uses wishlist data to send personalized offers and reminders to the user (e.g. a price drop on a saved hotel)
- The business receives reports on the effectiveness of notifications (conversion to bookings)
- The business receives a report on wishlist usage
- The user chooses the notification channel and can turn each notification type on or off

1.2.2 Out of Scope Functionality

- Splitting booking process between several users
- Splitting payment process between several users

1.3 System Perspective

[Provide a complete description of the factors that could prevent successful implementation or accelerate the projects, particularly factors related to legal and regulatory compliance, existing technical or operational limitations in the environment, and budget/resource constraints.]

The feature will be implemented as part of the TravelMate hotel marketing campaign.

The system must interact with:

- Guest user account system
- Booking database
- Notification system

The goal is to provide users with functionality for planning their trips. At the same time, the service collects data about user's preferences and proposes personalized sales. The wishlist is shareable, which makes it a marketing tool to engage more users.

1.3.1 Assumptions

- The user is planning his trips in advance
- The user travels with his friends and family

1.3.2 Constraints

- The feature must comply with the existing TravelMate platform architecture
- Development must follow the current database structure
- Notification services must use the existing notification infrastructure
- The solution must be implemented within the current project timeline

1.3.3 Risks

- The user may be unsatisfied about the non-saved list. The system should notify the non-authorized users, that their lists won't be saved if they do not authorize

1.3.4 Issues

- Notification channels about discounts may differ depending on the preferred communication chanel

2 Stakeholder Requirements

[The specific user requirements elicited from stakeholders should be listed, categorized by both priority and area of functionality to smooth the process of reading and tracking them. Include links to use case documentation, and other key reference material as needed to make the requirements as complete and understandable as possible. You may wish to incorporate the functional and non-functional requirements into a traceability matrix that can be followed throughout the project.]

A. Wishlists

SR-001 The user needs to organize hotels of interest into separate lists.

B. Comparison

SR-002 The user needs to compare key characteristics of selected hotels side by side.

C. Notifications

SR-003 The user needs to be informed about changes in preferred options that affect the booking decision.

SR-004 The user needs to control which notifications they receive and through which channel.

D. Guest access

SR-005 An unauthorized user needs to start a list without registration.

SR-006 The user needs to keep the list after signing in or registering.

E. Sharing & sync

SR-007 The user needs to share a list with others.

SR-008 The user needs access to their lists from any device.

F. Marketing & Sales

SR-009 The business needs to use wishlist data to engage users with personalized offers and reminders in order to increase the number of bookings.

SR-010 The business needs to measure how notifications affect the number of bookings.

SR-011 The business needs to track how actively users use wishlists.

The requirements in this document are prioritized as follows:

Value	Rating	Description
1	Critical	This requirement is critical to the success of the project. The project will not be possible without this requirement.
2	High	This requirement is high priority, but the project can be implemented at a bare minimum without this requirement.
3	Medium	This requirement is somewhat important, as it provides some value but the project can proceed without it.
4	Low	This is a low priority requirement, or a “nice to have” feature, if time and cost allow it.
5	Future	This requirement is out of scope for this project, and has been included here for a possible future release.

2.1 Functional Requirements

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
General / Base Functionality					
FR-G-001	1	Create, rename and delete a wishlist	Users plan different trips (e.g. weekend, vacation), so one flat list is not enough		User
FR-G-002	1	Add a hotel to and remove it from a wishlist	Basic list management; without it, the list cannot reflect changing preferences		User
FR-G-003	1	Display a table with the hotels’ characteristics (price, rating, location, amenities, etc.)	Comparing hotels on separate pages is slow and error-prone; one table speeds up the decision		User

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
FR-G-004	1	Compare from 3 up to 5 hotels at once	Fewer than 3 gives little comparison value; more than 5 makes the table unreadable, especially on mobile		User
FR-G-005	1	Highlight the differing values between compared hotels	Differences drive the choice, and highlighting removes the need to scan every cell		User
FR-G-006	1	Notify when available rooms fall below a threshold	The user can book before the option disappears; also creates urgency that supports conversion		User
FR-G-007	1	Notify about a campaign or discount for a preferred hotel	The user does not have to check prices manually and does not miss a better offer		User
FR-G-008	1	Allow an unauthorized user to create a temporary list in cookies	Forcing registration before first use increases drop-off; guests can try the feature first		User
FR-G-009	1	Transfer the temporary list to the account after sign-in	Prevents loss of the user's work and removes the main objection to registering		User
FR-G-010	1	Generate a link to share a list	Trips are often planned with other people, who		User

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
			need to see the same options		
FR-G-011	1	Synchronize lists across devices via the cloud	Users search on a computer and book on a phone, so the list must follow them		System
FR-G-012	2	Notify about a price decrease in a wishlist hotel	A saved hotel signals intent, and a price drop is the most relevant trigger to convert it into a booking		User
FR-G-013	2	Send a reminder about a saved but unbooked hotel after N days	Re-engages users who lost interest or forgot, which recovers sales that would otherwise be lost		User
Security Requirements					
FR-S-001	1	The share link shall be non-guessable (unique token)	A sequential or predictable link would let third parties open other users' lists		User, Invitee
FR-S-002	1	A list shall be accessible only to its owner and to holders of a valid share link	Lists reveal travel plans and preferences, so access must be restricted to those the owner chose		User, Legal/ Compliance team
FR-S-003	1	The system shall allow the user to give and withdraw consent to marketing messages	Personalized marketing based on saved hotels requires consent under data protection law, and the		User, Legal/Compliance team

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
			user must be able to withdraw it at any tim		
Reporting Requirements					
FR-R-001	2	The system shall track conversion from a marketing notification to a booking	Lets the business measure whether the goal (more bookings) is actually achieved		Marketing team
FR-R-002	2	The system shall provide the business with a report on notifications sent, opened and converted to bookings, by notification type	Shows which notifications work and where to adjust frequency or content		Marketing team
FR-R-003	2	The system shall provide the business with a report on wishlist usage (number of lists, saved hotels, shared lists)	Shows whether the feature is adopted and which parts are used		Marketing/ Business team
Usability Requirements					
FR-U-001	1	The system shall inform the user that the temporary list may be lost	Cookies can be cleared or expire; the user must know the risk and is encouraged to sign in to keep the list		User
FR-U-002	1	The system shall allow the user to choose the notification channel and turn off each notification type	Users differ in how they want to be contacted; control reduces annoyance and opt-outs.		User

Req#	Priority	Description	Rationale	Use Case Reference	Impacted Stakeholders
Audit Requirements					
FR-A-001	1	The system shall log each notification sent (type, recipient, time)	Lets the business resolve user complaints and verify the frequency limit		Customer support/ Marketing / Business team
FR-A-002	1	The system shall log each grant and withdrawal of marketing consent with a timestamp	Serves as proof of consent in case of a GDPR claim or user complaint		Legal/Compliance team/ Marketing team
FR-A-003	1	Audit logs shall be stored for N months and cannot be edited by users	A log works as evidence only if it is kept for a defined period and protected from changes		Legal/ Compliance team Business team

2.2 Non-Functional Requirements

[Include technical and operational requirements that are not specific to a function. This typically includes requirements such as processing time, concurrent users, availability, etc.]

ID	Requirement
NFR-001	Changes made to a list on one device shall appear on the user's other devices within 5 seconds in at least 95% of cases
NFR-002	95% of price-drop notifications shall be delivered within 15 minutes of the price change being recorded
NFR-003	Cookie usage shall comply with the applicable cookie-consent rules (GDPR)

NFR-004	Wishlist data shall be processed for marketing only with the user’s consent, in compliance with data protection law (GDPR)
NFR-005	The system shall support at least 10 users accessing the same shared wishlist simultaneously
